

Workshop on Jishu Hozen (Autonomous Maintenance)

Gemba training during the Jishu Hozen Workshop at Tirth Agro Technology

CII TPM Club India of the CII Institute of Quality launched a unique workshop on **Autonomous Maintenance** which was hosted by Tirth Agro Technology Pvt. Ltd., Rajkot, Gujarat on 25-26 October. Participants were allowed to actually work on the company machines to fully comprehend Autonomous Maintenance after which they were given a two hour tour of the entire plant to see the best practices of TPM.

Autonomous Maintenance (Jishu Hozen or JH) is one of the most important pillars in TPM and it is a team-based approach to maintenance activities and part of total productive maintenance. The aim of Jishu Hozen is to develop and empower equipment operators to prevent breakdowns, minor stops, quality defects and accidents autonomously. The role of operator working on the equipment is very important to practice JH. Hence, this workshop helped build skills in this area, with a combination of classroom and On-Job-Practice.

The 2-day Program was facilitated by Mr Ravi Joshi, Deputy Head & Senior Counsellor TPM Club India, CII IQ. 27 delegates benefited by this Workshop.
